

Abstract:

Sprayable oil-in-water emulsions, in particular O/W microemulsions, comprising inorganic pigments [lacuna] emulsifiers, the lipophilicity of which is dependent either on the pH or on the temperature, and one or more insect repellents.

It is not clear from the text whether the emulsions are sprayable or not. The text mentions "Sprayable oil-in-water emulsions" but does not specify whether the emulsions are sprayable or not. The text also mentions "inorganic pigments" and "emulsifiers" but does not specify whether the emulsifiers are inorganic or organic. The text also mentions "lipophilicity" but does not specify whether the lipophilicity is dependent on pH or temperature. The text also mentions "one or more insect repellents" but does not specify whether the repellents are natural or synthetic.
